

IN THE CLAIMS:

1 - 25. (Canceled)

26. (Currently Amended) Colored thermoplastic molding resin composition consisting essentially of a monoazo metal complex compound containing colorant composition and a thermoplastic resin, the incidence of skin sensitization in a skin sensitization potential test, based on the maximization method, of said colorant composition being not more than 20%, the purity of said monoazo metal complex compound containing colorant composition being not less than 90% as determined by separation of the colorant composition by high performance liquid chromatography, wherein the purity corresponds to the peak area percent of the monoazo metal complex peak using detection at 313 nm, said monoazo metal complex compound containing colorant composition being a compound of the following formula (1):

carbon atoms, $-\text{COO}-\text{R}^8$ or

R^8 represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

25 Y represents a hydrogen atom, a normal or branched alkyl group having 1 to 8 carbon atoms, an alkoxy group having 1 to 5 carbon atoms, a nitro group, or a halogen atom;

m represents an integer from 1 to 3;

M represents a divalent or trivalent metal;

p represents 1 or 2;

30 $(\text{A})^{q+}$ represents H^+ , NH_4^+ , a cation based on an alkali metal, a cation based on an organic amine, or a quaternary organic ammonium ion;

q represents 1 or 2; and

X represents 1 or 2.

27. (Canceled)

28. (Previously Presented) Resin composition of claim 26 wherein R^2 in Formula (1) above is Cl;

each of R^1 and R^3 through R^5 is a hydrogen atom;

5 R⁶ is a hydrogen atom or a normal or branched alkyl group having 1 to 18 carbon atoms;

 M is Cr, Fe or Cu; and

 (A)^{q+} is H⁺.

29. (Previously Presented) Resin composition of claim 26 wherein the thermoplastic resin is at least one resin selected from the group consisting of polyamide resin, polyethylene resin, polypropylene resin, polyester resin, polyphenylene sulfide resin and polyether ether ketone resin.

30. (Previously Presented) Resin composition of claim 26 wherein the thermoplastic resin contains fibrous reinforcing material.

31. (Previously Presented) Resin composition of claim 26 wherein the thermoplastic resin contains an inorganic filler.

5 32. (Currently Amended) Molded resin product ~~comprising~~ made of a colored thermoplastic molding resin composition in molded form, ~~containing~~ consisting essentially of a purified monoazo metal complex compound containing colorant composition and a thermoplastic resin, the monoazo metal complex compound containing colorant being formed by the steps of providing a non-purified monoazo metal complex compound and purifying the

non-purified monoazo metal complex compound to provide a purified monoazo metal complex compound containing colorant composition with the incidence of skin sensitization in a skin sensitization potential test, based on the maximization method, of said purified monoazo metal complex compound containing colorant composition being not more than 20%, the purity of said purified monoazo metal complex compound containing colorant composition being not less than 90% as determined by separation of the colorant composition by high performance liquid chromatography, wherein the purity corresponds to the peak area percent of the monoazo metal complex peak using detection at 313 nm, said purified monoazo metal complex compound containing colorant composition containing less than 10% of impurity substances of said non-purified monoazo metal complex compound associated with monoazo dyes and byproducts and impurity substances associated with metallization of monoazo dyes as determined by high performance liquid chromatography, said monoazo metal complex compound being a compound of the following formula (1):

wherein each of R^1 through R^4 and R^6 independently represents a hydrogen atom, a normal or
 20 branched alkyl group having 1 to 18 carbon atoms, a normal or branched alkenyl group having
 2 to 18 carbon atoms, a sulfonamide group, a mesyl group, a sulfonic acid group, a hydroxy
 group, an alkoxy group having 1 to 18 carbon atoms, an acetamino group, a benzoylamino
 group, a halogen atom, or $-COO-R^7$;

R^7 represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl
 25 group having 6 to 18 carbon atoms;

R^5 represents a hydrogen atom, a halogen atom, a nitro group, a carboxyl group, a normal or branched alkyl group having 1 to 18 carbon atoms, an alkenyl group having 2 to 18 carbon atoms, an alkoxy group having 1 to 18 carbon atoms, an aryl group having 6 to 18 carbon atoms, $-\text{COO}-R^8$ or

30 R^8 represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

Y represents a hydrogen atom, a normal or branched alkyl group having 1 to 8 carbon atoms, an alkoxy group having 1 to 5 carbon atoms, a nitro group, or a halogen atom;

m represents an integer from 1 to 3;

35 M represents a divalent or trivalent metal;

p represents 1 or 2;

$(A)^{q+}$ represents H^+ , NH_4^+ , a cation based on an alkali metal, a cation based on an organic amine, or a quaternary organic ammonium ion;

q represents 1 or 2; and

40 X represents 1 or 2.

33. (Canceled)

34. (Previously Presented) Molded resin product of claim 32 wherein R² in Formula (1) above is Cl;

each of R¹ and R³ through R⁵ is a hydrogen atom;

R⁶ is a hydrogen atom or a normal or branched alkyl group having 1 to 18 carbon atoms;

M is Cr, Fe or Cu; and

(A)^{q+} is H⁺.

35. (Previously Presented) Molded resin composition of claim 32 wherein the thermoplastic resin is at least one resin selected from the group consisting of polyamide resin, polyethylene resin, polypropylene resin, polyester resin, polyphenylene sulfide resin and polyether ether ketone resin.

36. (Previously Presented) Molded resin composition of claim 32 wherein the thermoplastic resin contains fibrous reinforcing material.

37. (Previously Presented) Molded resin composition of claim 32 wherein the thermoplastic resin contains an inorganic filler.

38. (Previously Presented) Molded resin composition of claim 32 wherein the product

is in the form of an eyeglass frame.

39. (Currently Amended) Method of providing a colored thermoplastic molding resin composition, the method comprising;

providing a thermoplastic resin;

providing a non-purified monoazo metal complex compound;

5 purifying the non-purified monoazo metal complex compound to provide a purified monoazo metal complex compound containing colorant composition, the incidence of skin sensitization in a skin sensitization potential test, based on the maximization method, of said purified monoazo metal complex compound containing colorant composition being not more than 20%, the purity of said purified monoazo metal complex compound being not less than
10 90% as determined by separation of the colorant composition by high performance liquid chromatography, wherein the purity corresponds to the peak area percent of the monoazo metal complex peak using detection at 313 nm, said purified monoazo metal complex compound containing colorant composition containing less than 10% of impurity substances of said non-purified monoazo metal complex compound as determined by high performance liquid
15 chromatography;

mixing the purified monoazo metal complex compound containing colorant composition with said thermoplastic resin , said purified monoazo metal complex compound being a compound of the following formula (1):

wherein each of R¹ through R⁴ and R⁶ independently represents a hydrogen atom, a
 20 normal or branched alkyl group having 1 to 18 carbon atoms, a normal or branched alkenyl
 group having 2 to 18 carbon atoms, a sulfonamide group, a mesyl group, a sulfonic acid group,
 a hydroxy group, an alkoxy group having 1 to 18 carbon atoms, an acetylamino group, a
 benzoylamino group, a halogen atom, or -COO-R⁷;

R⁷ represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl
 25 group having 6 to 18 carbon atoms;

R⁵ represents a hydrogen atom, a halogen atom, a nitro group, a carboxyl group, a
 normal or branched alkyl group having 1 to 18 carbon atoms, an alkenyl group having 2 to 18

carbon atoms, an alkoxy group having 1 to 18 carbon atoms, an aryl group having 6 to 18 carbon atoms, -COO-R⁸ or

30 R⁸ represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

Y represents a hydrogen atom, a normal or branched alkyl group having 1 to 8 carbon atoms, an alkoxy group having 1 to 5 carbon atoms, a nitro group, or a halogen atom;

m represents an integer from 1 to 3;

35 M represents a divalent or trivalent metal;

p represents 1 or 2;

(A)^{q+} represents H⁺, NH₄⁺, a cation based on an alkali metal, a cation based on an organic amine, or a quaternary organic ammonium ion;

q represents 1 or 2; and

40 X represents 1 or 2.

40. (Canceled)

41. (Previously Presented) Method of claim 39 wherein R² in Formula (1) above is Cl;

each of R^1 and R^3 through R^5 is a hydrogen atom;

R^6 is a hydrogen atom or a normal or branched alkyl group having 1 to 18 carbon atoms;

5 M is Cr, Fe or Cu; and

$(A)^{q+}$ is H^+ .

42. (Previously Presented) Method of claim 39 wherein the thermoplastic resin is at least one resin selected from the group consisting of polyamide resin, polyethylene resin, polypropylene resin, polyester resin, polyphenylene sulfide resin and polyether ether ketone resin.

43. (Previously Presented) Method of claim 39 wherein the thermoplastic resin contains fibrous reinforcing material.

44. (Previously Presented) Method of claim 39 wherein the thermoplastic resin contains an inorganic filler.

45. (Currently Amended) Method of providing a molded resin product, the method comprising:

providing a colored thermoplastic molding resin composition in molded form, characterized by high safety to the human body and a low incidence of skin sensitization; the

5 resin composition consisting essentially of a thermoplastic resin and a monoazo metal complex
compound containing colorant composition, the incidence of skin sensitization in a skin
sensitization potential test, based on the maximization method, of said colorant composition
being not more than 20%, the purity of said monoazo metal complex compound being not less
than 90% as determined by separation of the colorant composition by high performance liquid
10 chromatography, wherein the purity corresponds to the peak area percent of the monoazo metal
complex peak using detection at 313 nm, said colorant composition containing less than 10%
of remaining starting materials and impurity substances associated with monoazo dyes and
byproducts and impurity substances associated with metallization of monoazo dyes relative to
said colorant composition as determined by high performance liquid chromatography; and
15 molding the resulting resin composition including the monoazo metal complex
compound containing colorant composition to form a molded resin product, said monoazo
metal complex compound being a compound of the following formula (1):

wherein each of R¹ through R⁴ and R⁶ independently represents a hydrogen atom, a normal or branched alkyl group having 1 to 18 carbon atoms, a normal or branched alkenyl group having 2 to 18 carbon atoms, a sulfonamide group, a mesyl group, a sulfonic acid group, a hydroxy group, an alkoxy group having 1 to 18 carbon atoms, an acetylamino group, a benzoylamino group, a halogen atom, or -COO-R⁷;

R⁷ represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

R⁵ represents a hydrogen atom, a halogen atom, a nitro group, a carboxyl group, a

normal or branched alkyl group having 1 to 18 carbon atoms, an alkenyl group having 2 to 18 carbon atoms, an alkoxy group having 1 to 18 carbon atoms, an aryl group having 6 to 18 carbon atoms, -COO-R⁸ or

R⁸ represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

Y represents a hydrogen atom, a normal or branched alkyl group having 1 to 8 carbon atoms, an alkoxy group having 1 to 5 carbon atoms, a nitro group, or a halogen atom;

m represents an integer from 1 to 3;

M represents a divalent or trivalent metal;

p represents 1 or 2;

R⁸ represents a normal or branched alkyl group having 1 to 18 carbon atoms or an aryl group having 6 to 18 carbon atoms;

Y represents a hydrogen atom, a normal or branched alkyl group having 1 to 8 carbon atoms, an alkoxy group having 1 to 5 carbon atoms, a nitro group, or a halogen atom;

m represents an integer from 1 to 3;

M represents a divalent or trivalent metal;

p represents 1 or 2;

(A)^{q+} represents H⁺, NH₄⁺, a cation based on an alkali metal, a cation based on an organic amine, or a quaternary organic ammonium ion;

45 q represents 1 or 2; and

X represents 1 or 2.

46. (Canceled)

47. (Previously Presented) Method of claim 45 wherein R² in Formula (1) above is Cl; each of R¹ and R³ through R⁵ is a hydrogen atom;

R⁶ is a hydrogen atom or a normal or branched alkyl group having 1 to 18 carbon atoms;

5 M is Cr, Fe or Cu; and

(A)^{q+} is H⁺.

48. (Previously Presented) Method of claim 45 wherein the thermoplastic resin is at least one resin selected from the group consisting of polyamide resin, polyethylene resin, polypropylene resin, polyester resin, polyphenylene sulfide resin and polyether ether ketone resin.

49. (Previously Presented) Method of claim 45 wherein the thermoplastic resin contains fibrous reinforcing material.

50. (Previously Presented) Method of claim 45 wherein the thermoplastic resin contains an inorganic filler.

51. (Previously Presented) Method of claim 45 wherein the product is in the form of an eyeglass frame.
